For your security.

**Governikus<sup>®</sup> Communicator.**  
The client application for  
OSCI communication.

 **Governikus**  
Communicator

# Legally binding and compliant with the German Signatures Act

## Governikus® Communicator.

This is how it works.

### Communication software for OSCI messages.

Increased efficiency and reduced bureaucracy are primarily reflected in how electronic messages and data are handled. In the age of globalisation, communication via the internet between authorities and citizens or companies is an important and appropriate step into the future.

But it is precisely the requirements of public administration which do not permit electronic communication to be handled through conventional channels. Standard e-mail does not adhere to the statutory requirement of the written form, nor does it provide evidence of dispatch or receipt to stipulated deadlines. These requirements can only be fulfilled by an OSCI message, the standard for secure and legally compliant data transfer in German e-Government. OSCI communication guarantees authenticity, integrity and confidentiality in electronic communication.

Governikus Communicator "communicates" with the security middleware Governikus, which is part of the

Virtual Post Office of the German Federal Government (VPS). With its powerful end-to-end encryption, the client application ensures confidentiality and provides "electronic registered mail including advice of receipt" by means of logging and confirmation mechanisms.

If necessary or requested it is possible to use both advanced and qualified signatures. And Governikus Communicator is as easy to use as a regular e-mail application.

Governikus Communicator is a Java™-application, so it is guaranteed to run on different system platforms.

### Functions available:

- Open, change, close and delete a mailbox (only with software certificate)
- Send and receive messages
- Single or multiple digital signing of messages
- Encryption/decryption
- Certificate generation
- Certificate validation
- Tracking sheets
- Creation of inspection sheets
- Interface to registration server
- Interface to the intermediary Governikus
- Interface to implement customer and other specialized applications
- much more besides
